Package: settings (via r-universe)

October 12, 2024

Type Package

Title Software Option Settings Manager for R

Version 0.2.8

Author Mark van der Loo

Maintainer Mark van der Loo <mark.vanderloo@gmail.com>

Description Provides option settings management that goes beyond R's
default 'options' function. With this package, users can define
their own option settings manager holding option names, default
values and (if so desired) ranges or sets of allowed option
values that will be automatically checked. Settings can then be
retrieved, altered and reset to defaults with ease. For R
programmers and package developers it offers cloning and
merging functionality which allows for conveniently defining
global and local options, possibly in a multilevel options
hierarchy. See the package vignette for some examples
concerning functions, S4 classes, and reference classes. There
are convenience functions to reset par() and options() to their
'factory defaults'.
